

Attention : Fred Prince

This communication is in response to a letter sent June 5, 2006, concerning application no. 10/082,515. We elect to have our invention investigated as an anaerobic digester.

## Arguments

We desire you to examine this application as an anaerobic digester. The creation of a vacuum eliminates the possibility of evaporation due to this an outlet is required to handle effluent. The need of an overflow is imperative to handle continuous flow of water.
